

Iteration review:

1. We decided to drop our GPS approach since some places have no GPS reception, there for we are now using QR-Code banner that are specific to each location and they will be used for check in.
2. We changed the design for our profile page using CSS and will continue implementing the same methods in other pages.
3. We added functions for;
 - a. adding new friends.
 - b. seeing where my friends are.
 - c. seeing places I can check in to.
4. As of now you can add anyone in our list as a friend, we will add a search option and approve friend request option.
5. We always inspire for better and will improve our product as new technologies present themselves, and will listen to our costumers review.
