

Product Documentation:

WEB:

1. User can upload picture with the format of: jpeg, jpg, bmp. If you upload png type image, that will cause problems later in the process.
2. RE Gallery page – we try using CSS, but different pictures with different sizes will slide of the grid, that way the pictures are not in a fixed place.
3. Session does not die when user moves from page to page, causing the session to be still alive when not login out.
4. All CSS styles that we are using for our website are best compatible with Firefox and Chrome, and might not look as expected using explorer.

Application:

1. The application target is 4.1.2+, and is not compatible with lower OS version.
2. Scanning QR banner that is not of our making might cause unexpected results.
3. The location of the buttons in Profile page can be improved.
4. The pictures that are presented in the gallery are smaller than we wish them to be.
5. The application runs slow sometimes and we can improve the app's algorithm so it will run smoother.
